Georgia Dept. of Agricultu

Harvesting Cotton. Most Georgi farmers use machines to pick cotto a common state crop. A machine co do the work of about 20 farm hand

also raise hogs, horses, and poultry.

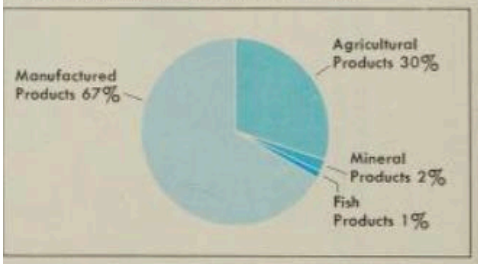
Coffee grows on small farms on Hawaii island. Several islands grow macadamia nuts and package them for sale on the mainland. Avocados, bananas, papayas, and many other fruits thrive in Hawaii. Small truck farms raise many vegetables for local use, including beans, Chinese cabbage, corn, potatoes, and taro.

Greenhouse and nursery products rank among the chief sources of agricultural income. Large quantities of flowers and leis are exported. Hilo is the center of the orchid-growing and flower-packaging industry.

Mining in Hawaii has an annual value of about $24 million. Stone accounts for nearly all the mineral production. Sand and gravel are also mined in the state.

Production of Goods in Hawaii

Total value of goods produced in 1977—$1,174,642,000



Percentages are based on farm income, value added by manufacture, and value of fish and mineral production.

Sources: U.S. government publications, 1978-1979.

Employment in Hawaii

Total number of persons employed in 1978—389,900

	Number of Employees
Wholesale & Retail Trade	96,100
Mining & Community, Social, & Personal Services	89,300
Government	87,100

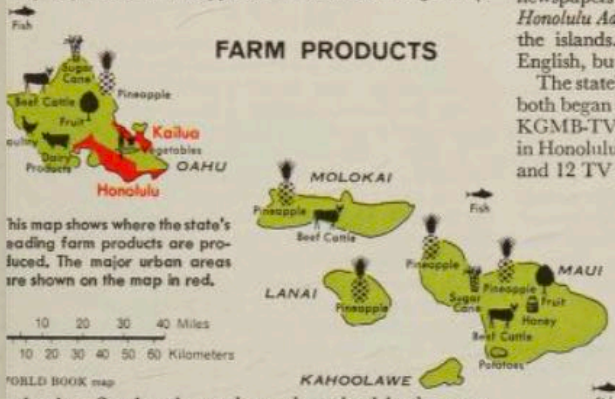
Harvesting Hawaiian Pineapples goes on day and night during the peak season. Pineapples are Hawaii's second largest crop.



This map shows where the state's leading farm products are produced. The major urban areas are shown on the map in red.

Fishing Industry. Millions of pounds of fish are caught each year in Hawaiian waters, with a yearly value of about $9½ million. The most important commercial fish is the skipjack, a kind of tuna. Honolulu is the chief fishing port.

Electric Power. Hawaii has no oil deposits, so most of the state's generating plants use petroleum shipped from Asia and the Near East. These plants are operated by private companies. In 1979, construction began on a geothermal power plant on Hawaii Island.

Transportation is one of Hawaii's chief problems. Because the state has little industry, most things that the people use must be shipped by air or sea from the mainland. This makes many items more expensive than on the mainland. Travel within the state is expensive because the islands are widely separated.

Aviation provides the quickest and easiest way to travel from one island to another, and from the islands to the mainland. Two airlines provide many daily flights among the main islands. Other airlines provide daily flights from Hawaii to other parts of the world.

municipalities of Honolulu.

Railroads formerly hauled sugar cane and freight in Hawaii but they have been replaced by trucks. Today, trains run only along a scenic route on Maui.

Communication. Hawaii's first English-language newspaper, the *Sandwich Island Gazette*, began publication in Honolulu in 1836. The islands have about 20 newspapers today. The *Honolulu Star-Bulletin* and the *Honolulu Advertiser* have the greatest daily circulations in the islands. Most of the newspapers are printed in English, but some are in Chinese or Japanese.

The state's first two radio stations, KDYX and KGU, both began broadcasting in Honolulu on May 11, 1922. KGMB-TV, the first television station, was established in Honolulu in 1952. Hawaii has about 30 radio stations and 12 TV stations.

Sugar Cane, Hawaii's most important crop, is rushed by trucks to processing mills.

Werner Stoy, Camera Hawaii

Cattle Ranching uses about a quarter of all the land in Hawaii.

Farmers can then plant other crops in the fields.

The sale of beef cattle and calves earns about 15 per cent of Louisiana's cash farm income. Other leading livestock products include eggs, *broilers* (chickens between 9 and 12 weeks old), and hogs. Most of the large cattle ranches are in the southwestern part of the state, and along the Red and Ouachita rivers. Dairy farms operate near the larger cities.

Truck farms in southern Louisiana produce beans, cabbage, peppers, tomatoes, and other vegetables. During the winter and spring, Louisiana helps supply vegetables to the northern and eastern states. Louisiana is a leader in strawberry production. The state also produces many pecans and tung nuts.

St. James Parish is the world's only source of a kind
